Funny ColdFusion Error Message

Posted At: January 26, 2010 10:41 AM | Posted By: Bob Silverberg Related Categories: ColdFusion, Funny

It's not often that a ColdFusion error message makes me chuckle, but this one did:

The following information is meant for the website developer for debug

Error Occurred While Processing Request

Invalid token, found on line 4 at column 19.

The CFML compiler was processing:

- · A cfelseifvariables tag beginning on line 4, column 2.
- · A cfelseifvariables tag beginning on line 4, column 2.

The error occurred in

/Applications/ColdFusion9/wwwroot/ORMTesting/FunnyError.cfm: line 4

2 : <cfif variables.test eq 2>

3 : Hello

4 : <cfelseifvariables.test eq 3>

5 : World
6 : </cfif>

I guess ColdFusion's parser has different priorities than I would have expected. Either that, or there's an undocumented cfelseifvariables tag that I never knew about.
