ValidateThis Requires ColdFusion 8.0.1

I'd like to thank Adam (who didn't leave his URL) for bringing this omission in the requirements for the framework to my attention.

Because of the way the framework uses onMissingMethod, ColdFusion 8.0.1 is required - it will not work properly under 8.0. I was aware of this, but forgot to specify it in the requirements. I hope this hasn't inconvenienced anyone other than Adam.

He asked whether it was possible for me to make the framework backward compatible with CF 8.0, and while I'm sure it's possible I don't feel that it would be a worthwhile use of resources. If there are those out there who would be interested in using the framework but are currently limited to running on 8.0, please let me know. If the demand is there I would certainly consider seeing what I can do to make it work.
