

Transfer's getMemento() has Changed

Posted At : August 20, 2008 8:54 AM | Posted By : Bob Silverberg

Related Categories: ColdFusion, Transfer

Although I have been fairly vocal about the fact that the `getMemento()` method available from Transfer (an ORM for ColdFusion) is undocumented and subject to change, and have even written [my own implementation of it](#) in my [AbstractTransferDecorator](#), I discovered today that I am still calling it one place in my ColdFusion application code (which I wrote a long time ago). And that one line of code is now throwing an error. I understand from [some comments](#) on [Jason Dean's](#) blog that the internal implementation of mementos did change recently, in Transfer 1.1 according to [Mark Mandel](#), which explains my problem.

I just thought it would be worth sharing this with the community, as I have a feeling that I'm not the only one to use `getMemento()` on occasion. So be warned: if any of your code uses `getMemento()` test it with the latest BER of Transfer as you may need to make changes to your code before deploying Transfer 1.1.
